DBNAlliance & The New Open Exchange Network (U.S. Market)

DIGITAL BUSINESS NETWORKS ALLIANCE™

In the United States, the exchange of B2B document is still incredibly costly and inefficient. This is because the U.S. faces a distinctive challenge— the absence of a central governing body to mandate a nationwide e-invoicing framework.

That's why the Digital Business Networks Alliance (DBNAlliance) established an electronic delivery exchange network for all commercial enterprises in North America.

Why Use The Framework?

This new exchange network, backed by various industry bodies, allows businesses to connect once, and share electronic documents with one another, regardless of the platform, system, application or network used for processing documents. Participants can easily find their business partners on the exchange network, facilitating seamless connectivity.

For those sending invoices, the framework guarantees a secure delivery, speeds up payments, and allows for instant invoice response notifications.

On the buyer's end, buyers enjoy simplified processes, a significant cut down on processing costs, and a 100% accuracy in processing.

How to Join the DBNAlliance?

More than 30 certified service providers are prepared to assist you in connecting your financial system. Browse the service provider list to find the service provider that aligns best with your specific needs:

- Every company, U.S based and non-U.S. based, aspiring to exchange e-invoicing in and with the United States, can integrate their financial system through a DBNA Service Provider.

- For businesses desiring a more active role, enrollment as an associate member or a full member (with voting rights) provides an opportunity for direct engagement in managing and forming the framework.
